Guida non ufficiale Node-RED HomeAssistant antifurto365 | meian | casasicura.it

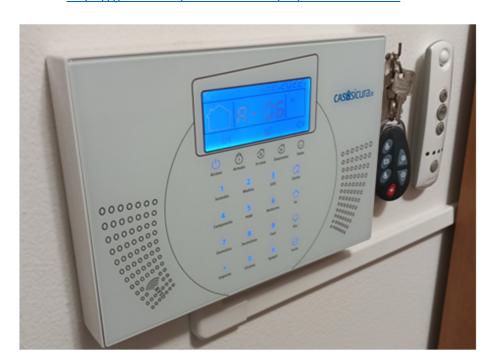

Testata su:

Centralina "Siqura Wifi" A1.55F_M_TCP

di casasicura.it amministrazione sulla porta 80 user admin e password 012345 (default)

HomeAssistant Supervised-Installer (container docker)

https://github.com/home-assistant/supervised-installer

http://IP/index.htm http://IP/Option.htm http://IP/Zone.htm

IP pubblico o DNS che punta all' IP della centralina (con l'IP locale ho trovato problemi di connessione)

Nel mio caso ho utilizzato DynDns.it (*DYNDNSIP*) impostato su il modem TIM con NAT (apertura porte): porta esterna 80 -> porta interna 80 -> IP fisso locale della centralina.

Accesso pagina amministrazione centralina

http://DYNDNSIP/index.htm

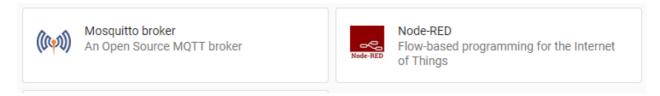

User: admin Pass: 012345

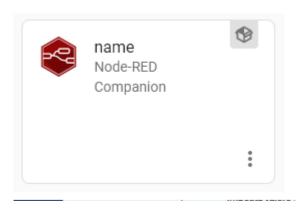

Attiva la lettura dei sensori dalla pagina della centrale (http://DYNDNSIP/Option.htm)

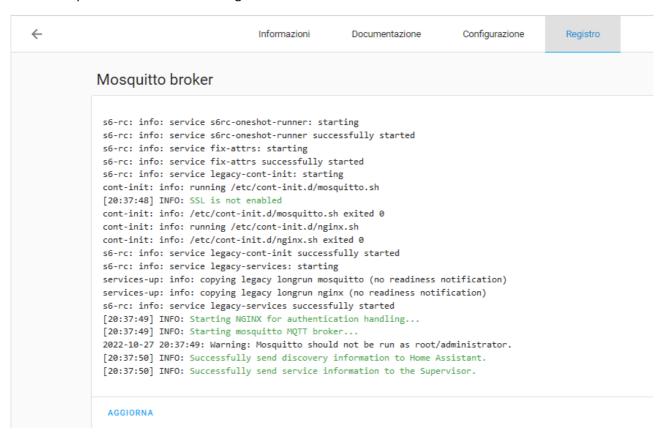

Installa i componenti aggiuntivi Mosquito broker e Node-RED su HomeAssistant:

Installa da "dispositivi e servizi" RED-Companion (download da HACS)

Avvia Mosquito broker e controlla i log:

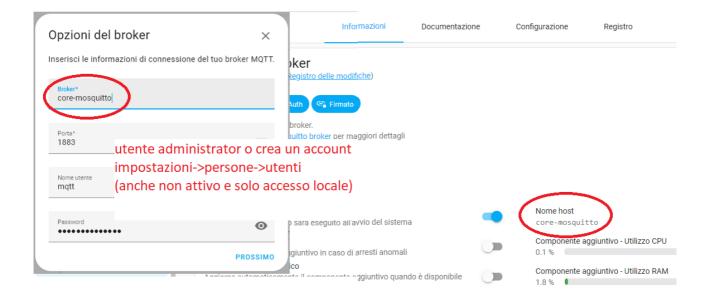

Dovrebbe apparire un nuovo dispositivo trovato: MQTT

Oppure aggiungi manualmente da "+ aggiungi integrazione" e cerca MQTT

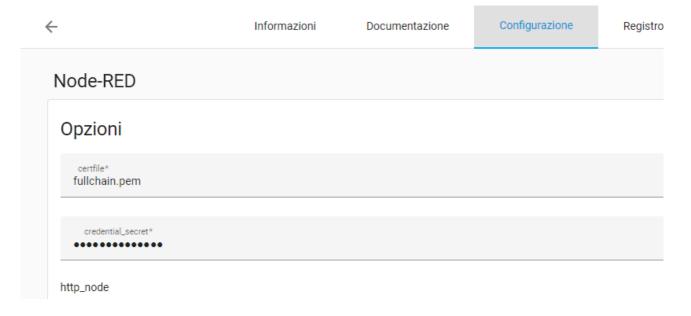

Configura MQTT:

Broker: nome host mosquito broker User: utente creato su homeassistant

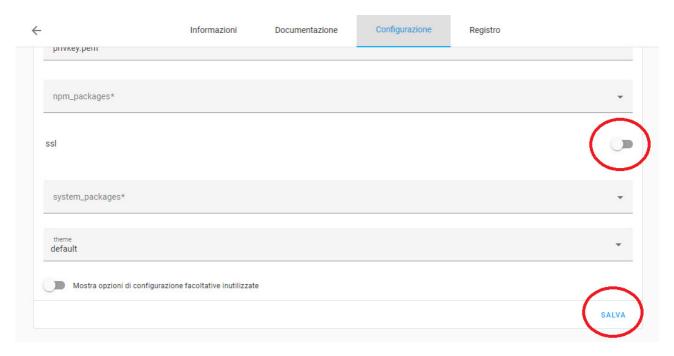

Configura Node-RED:

Inserisci un credential_secret:

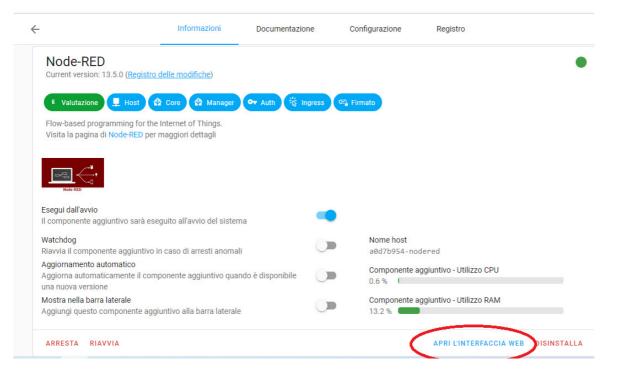

Disabilita SSL:

Avvia e verifica i log:

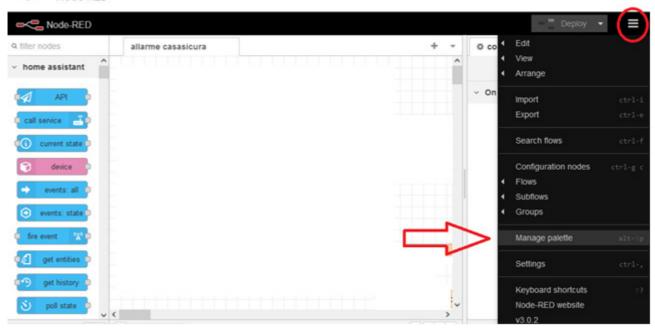

```

Apri Node-RED:

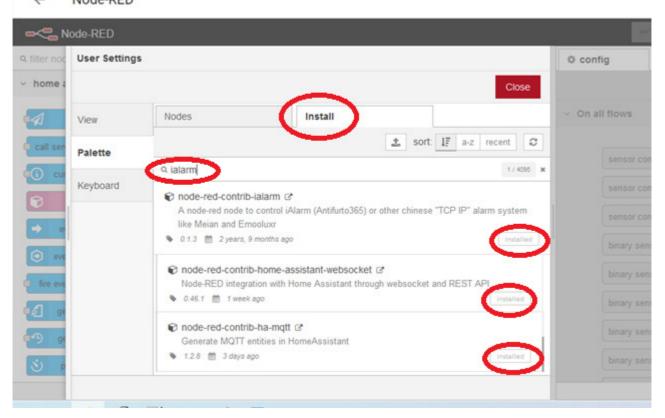

Installa palette:

← Node-RED

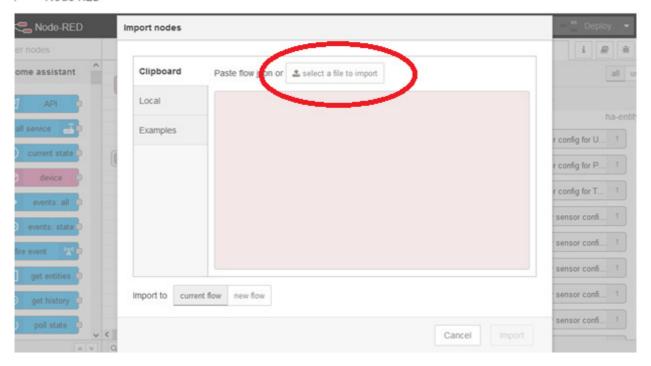

Cerca e installa websocket | ialarm | ha-mqtt

← Node-RED

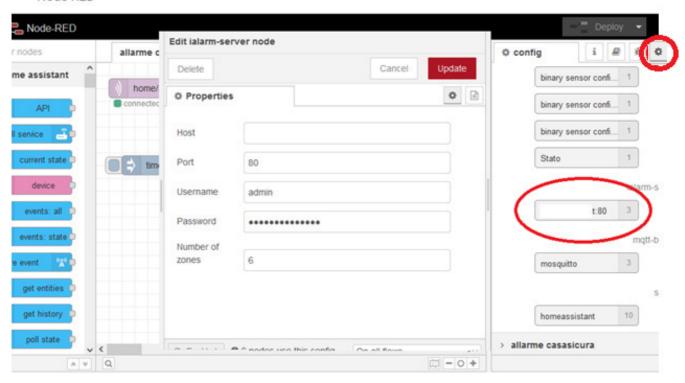

Importa il json

Node-RED

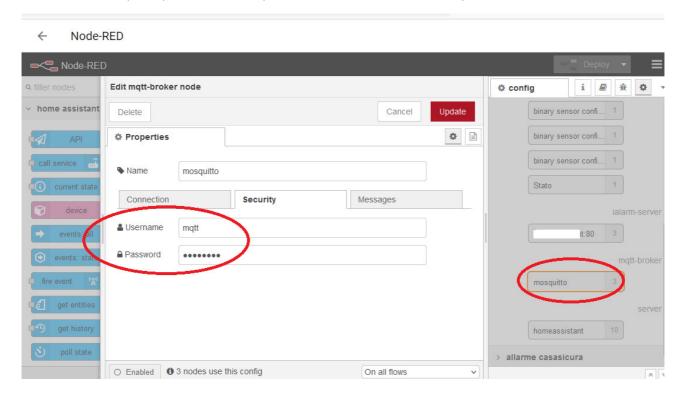

Inserisci i dati della centralina Ip,User,Pass,porta (Host=DYNDNSIP)

Node-RED

Inserisci il server mqtt

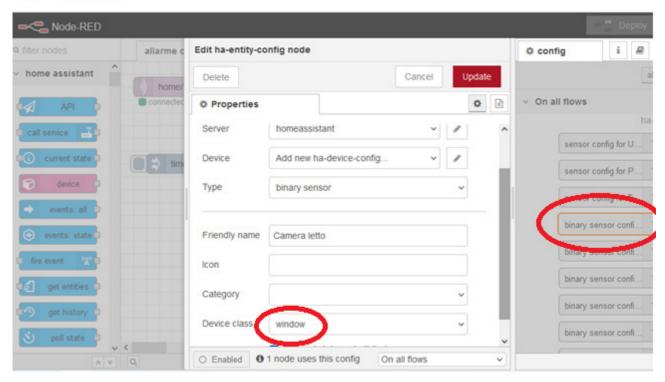

server: core-mosquitto porta 1883 user/pass creati e inseriti su core-mosquitto

Edita i sensori (zona = sensore)

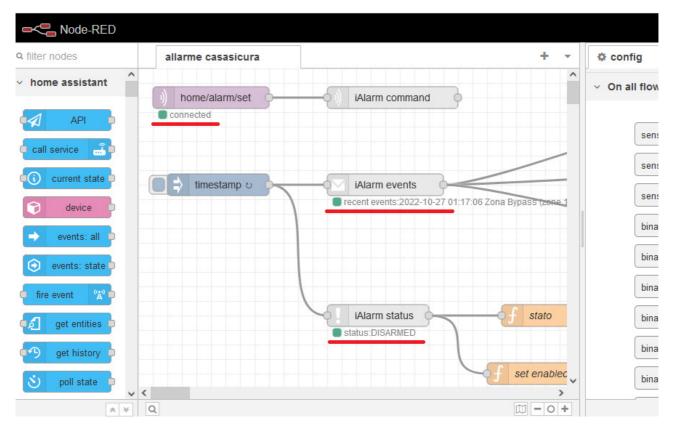

← Node-RED

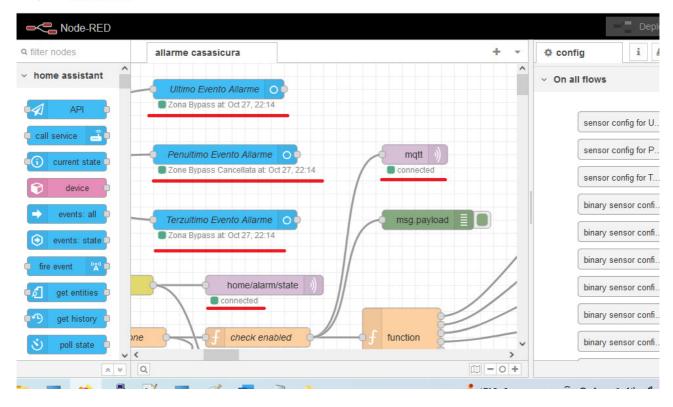

Verifica le connessioni

← Node-RED

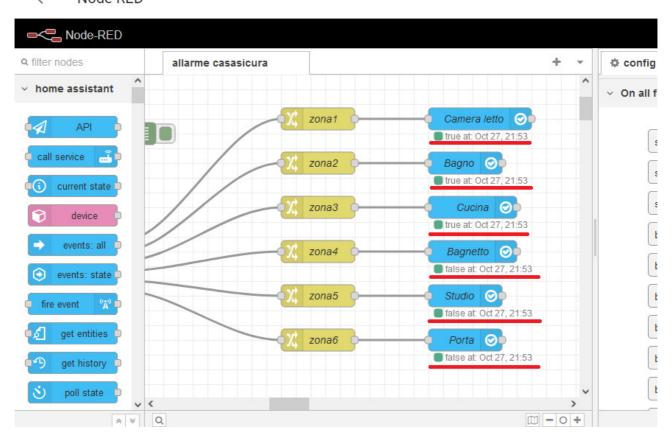

← Node-RED

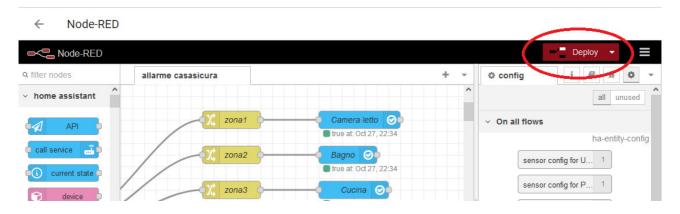

Sensori: true= aperto false=chiuso

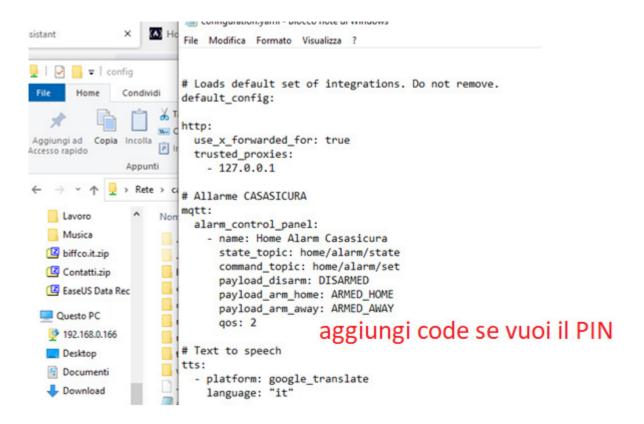

← Node-RED

Deploy:

Aggiungi il pannello allarme nel configuration.yaml tramite samba

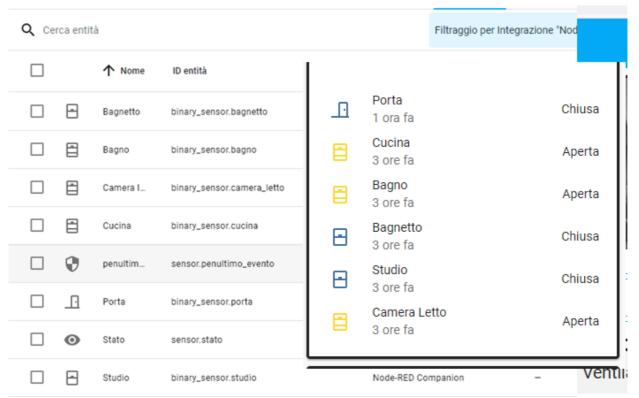

Completato

Riavvia HomeAssistant e tutti i container (ancora meglio tutto il server fisico)

Risultato:

Alarm Panel
